

SAILING THE SURFACE OCEANOGRAPHIC CURRENTS

Four friends that have a passion for sailing decided they would go out and explore a major ocean current. Unfortunately, they could not all decide on the same current to explore! Finally, each friend decided to go out on their own and explore a different ocean current, such as the Benguela Current. Interestingly, each current is also located in a different region of the world's ocean basins, such as the North Atlantic Ocean versus the South Atlantic Ocean. Match each person with the ocean current he/she sailed, and the ocean basin where that current is located.

- 1) Kyle did not sail on the Canary Current or the Benguela Current.
- 2) Maggie cannot wait to return to the South Atlantic.
- 3) The Canary Current flows clockwise in the North Atlantic.
- 4) The Kuroshio Current in the North Pacific Ocean was not sailed by Kyle or Alice.

	Peru	Canary	Benguela	Kuroshio	South Atlantic	North Atlantic	North Pacific	South Pacific
